Ideation Phase
Brainstorm & Idea Prioritization Template

Date	4 October 2026
Team ID	
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Session objective	Align the team on the ServiceNow Incident form scope and agree how client-side controls will be used to enforce data quality before records are submitted.
Team gathering	Team aligned on the shared scope of Incident Management, UI Policy, UI Policy Actions, Client Scripts and Form Validation, and on the goal of the session.
Selected problem statement	Incident records are often submitted with incomplete, inconsistent or incorrect data because field behaviour and validation rely only on user awareness and manual checks. (Refer to PS-1, PS-2 and PS-3 in the Define the Problem Statements document.)
How might we	How might we enforce conditional field behaviour and save-time validation directly on the Incident form, so that every record meets the defined business rules before it is submitted?
Ground rules	Stay in topic. Encourage wild ideas. Defer judgment. Listen to others. Go for volume. If possible, be visual.

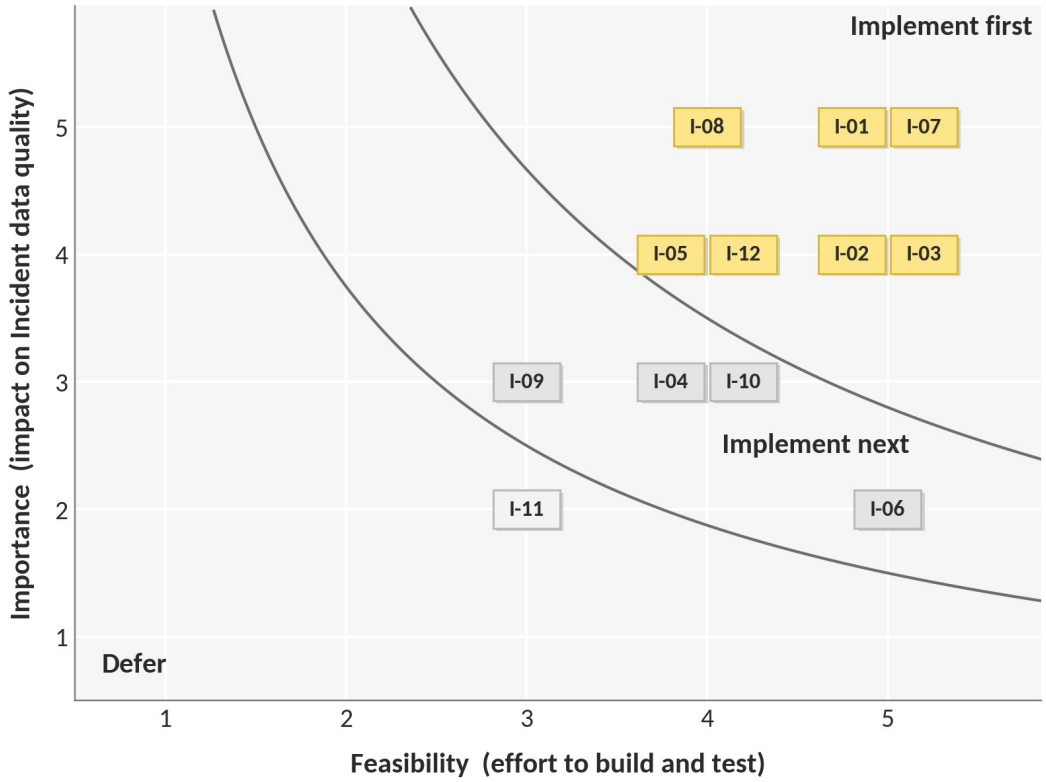

Step-2: Brainstorm, Idea Listing and Grouping

Each team member listed ideas that address the problem statement. The ideas were then grouped into four themes, shown below with a reference ID for each idea.

Group	Idea ID	Idea
Conditional field behaviour (UI Policy and UI Policy Actions)	I-01	Make Resolution code and Resolution notes mandatory when State is Resolved or Closed.
	I-02	Show and require On hold reason only when State is On Hold; hide it otherwise.
	I-03	Make Assignment group mandatory once State moves to In Progress.
	I-04	Make Category and Impact read-only once the Incident is Closed.
Auto-population and dynamic response (Client Script: onChange)	I-05	Auto-populate Location and Department from the selected Caller.
	I-06	Clear Subcategory automatically when Category changes.
Save-time validation (Client Script: onSubmit)	I-07	Block save when Short description is empty or shorter than 10 characters.
	I-08	Prevent Resolved or Closed from being saved without Resolution notes and show an error message.
	I-09	Warn before saving a Critical (Priority 1) incident without a Configuration item.
User guidance and governance	I-10	Show field messages and info banners that guide the user on what to enter.
	I-11	Apply stricter rules to non-admin roles and allow controlled exceptions for administrators.
	I-12	Test the UI Policies and Client Scripts in a sub-production instance and move them through an Update Set.

Step-3: Idea Prioritization

Every idea was placed on an Importance versus Feasibility grid. Importance reflects the impact on Incident data quality; Feasibility reflects how easily the idea can be built and tested with ServiceNow client-side controls. Both were rated from 1 (low) to 5 (high) and the score is Importance × Feasibility. A score of 14 or above is Implement first, 8 to 13 is Implement next, and below 8 is Defer.

Idea ID	Idea	Importance	Feasibility	Score	Priority
I-01	Mandatory resolution fields	5	5	25	Implement first
I-02	Conditional On hold reason	4	5	20	Implement first
I-03	Mandatory Assignment group	4	5	20	Implement first
I-04	Read-only fields after closure	3	4	12	Implement next
I-05	Auto-populate from Caller	4	4	16	Implement first
I-06	Clear Subcategory on change	2	5	10	Implement next
I-07	Short description validation	5	5	25	Implement first
I-08	Block Resolve without notes	5	4	20	Implement first
I-09	Critical incident warning	3	3	9	Implement next
I-10	Field messages and guidance	3	4	12	Implement next
I-11	Role-based rule exceptions	2	3	6	Defer
I-12	Testing with an Update Set	4	4	16	Implement first

Outcome: Ideas rated Implement first (I-01, I-02, I-03, I-05, I-07, I-08 and I-12) form the scope of this build. Together they demonstrate conditional mandatory fields, field visibility control, auto-population and save-time validation on the Incident form.
