Ideation Phase
Define the Problem Statements

Date	4 October 2026
Team ID	
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - *who are they?*	Describe the customer and their attributes here
I'm trying to	*List their outcome or "job" the care about - what are they trying to achieve?*	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way – *what bothers them most?*	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists – *what needs to be solved?*	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view – *how does it impact them emotionally?*	Describe the emotions the result from experiencing the problems or barriers

Example:

Problem Statements:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A service desk agent who logs and updates Incident records	Capture complete and accurate details so the incident is triaged and routed correctly	The form lets me save with blank or incorrect fields and gives no hint of what is required	No conditional mandatory rules or save-time checks exist on the Incident form	Uncertain and frustrated, as records are sent back for rework
PS-2	A support engineer (fulfiller) who works on and resolves incidents	Resolve incidents within SLA using the information on the record	Details such as assignment group, hold reason or resolution notes are often missing	Field behaviour is not controlled by UI Policies or Client Scripts, so business rules are not enforced	Delayed and annoyed, as I have to chase the caller for information
PS-3	An ITSM manager responsible for incident reporting and SLA compliance	Rely on Incident data for accurate reports and trend analysis	Reports contain incomplete, inconsistent and mismatched values	Data quality depends on user awareness and manual checks instead of validation at the point of entry	Concerned, with low confidence in the reported numbers
