Project Design Phase-II
Data Flow Diagram & User Stories

Date	4 October 2026
Team ID	
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Data Flow Diagrams:

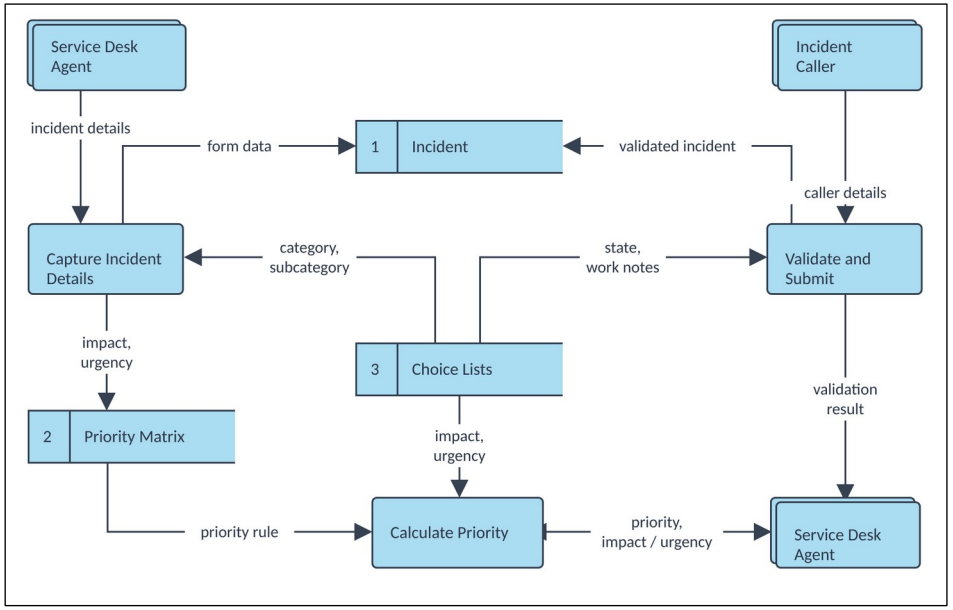

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Flow: (Simplified)

1. Agent opens the Incident form and enters caller, category, impact and urgency details.
2. UI Policy applies its conditions: Category Software makes Subcategory mandatory and shows Assignment Group; Priority 1 - Critical makes Work notes mandatory.
3. onChange Client Script recalculates Priority whenever Impact or Urgency changes.
4. onSubmit Client Script checks Short Description length and Work notes on Resolve.
5. Valid records are saved to the Incident table; invalid submissions are aborted with an error message.

DFD Level 0: Incident Data Validation

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Service Desk Agent	Incident Data Entry	USN-1	As a Service Desk Agent, I must enter a Short Description of at least 10 characters so the incident is clearly described.	Error is shown and submission is blocked below 10 characters	High	Sprint-1
		USN-2	As a Service Desk Agent, when I select Category Software, I must choose a Subcategory so the incident is routed correctly.	Subcategory becomes mandatory and Assignment Group is displayed	High	Sprint-1
		USN-3	As a Service Desk Agent, when Priority is 1 - Critical, I must add Work notes so the incident is documented.	Work notes is mandatory and the record cannot be saved without it	High	Sprint-1
	Priority Management	USN-4	As a Service Desk Agent, I want Priority populated automatically from Impact and Urgency so that it is consistent.	Priority updates on change and matches the matrix	High	Sprint-2
		USN-5	As a Service Desk Agent, I cannot edit Priority directly, so it always follows Impact and Urgency.	Priority field is read-only on the Incident form	Medium	Sprint-2
	Incident Resolution	USN-6	As a Service Desk Agent, I must add Work notes when I resolve an incident so the resolution is documented.	Submission is aborted with a message if Work notes are empty on Resolve	High	Sprint-2
Incident Resolver	Resolution Quality	USN-7	As an Incident Resolver, I want resolved incidents to include Work notes so I can see how each issue was fixed.	Every resolved incident contains Work notes	Medium	Sprint-2

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
		USN-8	As an Incident Resolver, I want Software incidents to arrive with a Subcategory and Assignment Group so I do not reassign them.	Software incidents always have a Subcategory and Assignment Group	Medium	Sprint-2
Service Desk Manager	Reporting and SLA	USN-9	As a Service Desk Manager, I want consistent Priority values so that reports and SLA tracking are accurate.	Priority matches the matrix across Incident records	Medium	Sprint-3
		USN-10	As a Service Desk Manager, I want every critical incident to carry Work notes so I can review escalations.	All Priority 1 - Critical incidents contain Work notes	Medium	Sprint-3
Administrator	Configuration	USN-11	As an Administrator, I can configure UI Policies with conditions and actions on the Incident form to control field behavior.	UI Policies are active and apply as designed	High	Sprint-1
		USN-12	As an Administrator, I can maintain onChange and onSubmit Client Scripts on Incident so validation stays accurate.	Client Scripts run on the form without script errors	High	Sprint-2
