Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	4 October 2026
Team ID	
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Incident Data Validation	Short Description must contain at least 10 characters Block submission when validation fails Display a clear error message to the user
FR-2	Conditional Field Behavior (UI Policy)	Category = Software: make Subcategory mandatory and show Assignment Group Priority = 1 - Critical: make Work notes mandatory
FR-3	Automatic Priority Calculation	Detect changes to Impact and Urgency (onChange) Auto-populate Priority from the Impact and Urgency matrix
FR-4	Resolution Control	Require Work notes when the incident is resolved Abort submission if Work notes are empty on Resolve
FR-5	Field Access Control	Make Priority read-only so it is derived only from Impact and Urgency
FR-6	User Feedback and Guidance	Show field messages for mandatory and invalid fields Retain entered data when a submission is aborted

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	The form shows mandatory indicators and plain error messages and responds immediately without a page reload.
NFR-2	**Security**	Client-side controls complement role-based access control on the Incident table; no sensitive data is handled in scripts.
NFR-3	**Reliability**	Validation gives the same result for every user and handles empty values without script errors.
NFR-4	**Performance**	Checks run in the browser, so field validation needs no server round trip and adds no noticeable delay.
NFR-5	**Availability**	Controls run within the ServiceNow instance and are available whenever the Incident form is available.
NFR-6	**Scalability**	Rules apply to all Incident records and can be extended to more fields or tables with additional UI Policies and Client Scripts.
